Aryan Jamatia

+91-9366425765 | aryanjamatia9862@gmail.com | GitHub | LinkedIn | Portfolio

PROFILE

Detail-oriented Data Science and Full Stack Development student skilled in building scalable web and AI-based applications. Proficient in Python, MERN stack, FastAPI, and React Native with a strong foundation in data analysis, machine learning, and backend systems. Focused on delivering efficient, user-centric, and performance-driven solutions.

EDUCATION

Assam Down Town University — Guwahati, *India*

Bachelor of Computer Application (Pursuing) — 2023 – 2026

Kendriya Vidyalaya Rangapahar (CBSE) — Dimapur, *India*

Higher Secondary (12th Grade) – Humanities | 77% — 2022 – 2023

Secondary School (10th Grade) | 72% — 2020 – 2021

SKILLS

- Python, Data Analysis, Data Cleaning, Machine Learning, NLP
- MERN Stack (MongoDB, Express.js, React.js, Node.js)
- FastAPI, Django, SQL, MySQL
- React Native, REST APIs
- Problem Solving, Communication, Teamwork

CERTIFICATIONS

- Cloud Computing and Distributed Systems – SWAYAM (2026)
- Introduction to IoT – SWAYAM (2025)
- Node.js (Basic) – HackerRank (2025)
- Supervised Machine Learning: Regression – Coursera (2024)
- Introduction to IT and AWS Cloud – Coursera (2024)
- SQL (Intermediate) – HackerRank (2024)
- Python (Basic) – HackerRank (2024)

EXPERIENCE

Data Science Virtual Intern

CodSoft | June 2025 – July 2025

- Analyzed datasets of 5,000+ records using Python (Pandas, NumPy) to extract insights and prepare clean data
- Built and tested machine learning models, increasing prediction accuracy by ~15%
- Designed data pipelines that reduced manual preprocessing effort by ~30%
- Applied evaluation techniques and visualization methods to improve model reliability

PROJECTS

Automated Attendance Management System

• Engineered a cross-platform attendance system using React Native and MERN stack with mobile (student) and web/mobile (teacher) support
• Designed IP-based validation to allow attendance only when students are connected to the same network as the host, reducing proxy attendance
• Implemented a real-time heartbeat mechanism (10s interval) to track active students and ensure accurate session participation
• Developed QR-based session system where teachers generate dynamic QR codes to initiate attendance sessions
• Built role-based dashboards for teachers and students with multi-class and multi-subject management similar to Google Classroom
• Automated attendance validation using timestamp comparison, ensuring attendance is recorded only for continuously active students
• Created REST APIs and MongoDB schemas for managing users, classes, sessions, and attendance records

AI-Based Driver Drowsiness Detection System

• Engineered a real-time monitoring system using OpenCV and MediaPipe achieving ~90% detection accuracy
• Applied facial landmark tracking and eye aspect ratio analysis for fatigue detection
• Integrated alert mechanisms to enhance driver safety and reduce accident risk

AI-Powered Resume Parser

• Designed a scalable resume parsing system using MERN stack and FastAPI handling 30–40 resumes per batch
• Extracted structured candidate data using NLP techniques and stored results in MongoDB
• Created a ranking algorithm that reduced manual screening effort by ~60%

Local News Mobile Application

• Created a React Native mobile app for delivering categorized local news content
• Optimized navigation and UI responsiveness for better user experience
• Enhanced app performance for smooth operation on Android devices

3-Factor Authentication System (Smart India Hackathon 2024)

• Architected a secure authentication system combining password, OTP, and identity verification
• Strengthened system security through multi-layer authentication mechanisms
• Collaborated with a team to design workflows and system architecture

Railway Reservation System

• Built a web-based system using Django and MySQL for ticket booking and management
• Integrated authentication, train search, booking, and fare calculation modules
• Managed structured databases for users, schedules, and transactions
• Optimized backend operations for efficient data handling
