Aryan Jamatia

+91-9366425765 | aryanjamatia9862@gmail.com | GitHub | LinkedIn

PROFILE

Detail-oriented Data Science and Full Stack Development student with hands-on experience in building real-world applications using Python, Django, MERN stack, FastAPI, and React Native. Strong foundation in data analysis, machine learning basics, backend APIs, and secure authentication systems. Experienced in academic and virtual internship projects with a focus on scalable, user-centric solutions.

EDUCATION

Assam Down Town University — Guwahati, *India*
Bachelor of Computer Application (Pursuing) — 2023 – 2026

Kendriya Vidyalaya Rangapahar (CBSE) — Dimapur, *India*
Higher Secondary (12th Grade) – Humanities | 77% — 2022 – 2023

Kendriya Vidyalaya Rangapahar (CBSE) — Dimapur, *India*
Secondary School (10th Grade) | 72% — 2020 – 2021

SKILLS

Python | Data Cleaning | MERN stack | NLP | Data Analysis | SQL | Machine Learning Fundamentals | Communication |Team Work

CERTIFICATIONS

- Cloud Computing and Distributed Systems –SWAYAM (2026)
- Introduction to IoT –SWAYAM (2025)
- Node (Basic) –HACKER RANK (2025)
- Supervised Machine Learning: Regression –COURSERA (2024)
- Introduction to Information Technology and AWS Cloud –COURSERA (2024)
- SQL (Intermediate) –HACKER RANK (2024)
- Python (Basic) –HACKER RANK (2024)

EXPERIENCE

Data Science Virtual Intern
CodSoft | *5 June 2025 – 5 July 2025*

- Worked on real-world data science tasks involving data preprocessing, analysis, and basic machine learning models.
- Gained practical exposure to Python-based data analysis libraries and model evaluation techniques.
- Improved understanding of end-to-end data workflows, from raw data to insights.

PROJECTS

AI-Based Driver Drowsiness Detection System

- Built an AI-powered driver monitoring system using Python, OpenCV, and MediaPipe for real-time drowsiness detection.
- Used facial landmark tracking and eye aspect ratio analysis to detect prolonged eye closure.
- Integrated a **real-time alert system** to warn drivers and reduce fatigue-related accidents.

AI-Powered Resume Parser

- Built an AI-based resume parsing system using MERN Stack and FastAPI with support for bulk processing of 30–40 resumes at a time.
- Extracted structured candidate data (skills, qualifications, experience) using NLP techniques and stored results in MongoDB.
- Implemented a scoring and ranking mechanism to shortlist candidates based on recruiter-defined criteria, reducing manual screening effort.

Local News Mobile Application

- Built a mobile application using React Native to display local news content.
- Implemented category-based news browsing and responsive UI for Android devices.

3-Factor Authentication System for UIDAI – *Smart India Hackathon 2024 (Group Project)*

- Designed a secure 3FA authentication system combining password, OTP, and additional identity verification.
- Focused on improving digital identity security for UIDAI-related use cases.
- Collaborated in a team to design system architecture and security workflows.

Railway Reservation System

- Developed a web-based railway reservation system using Django.
- Implemented user and admin authentication, train search, ticket booking, and fare calculation features.
- Integrated MySQL database for storing users, train details, and booking history.
